

Saralux

Mem360's Learning Management Module is a learning management system built with the unique needs of associations and nonprofits in mind. It's integrated with our comprehensive Association Management Software platform and has a robust set of features to support many types of educational content and sessions. Our end-to-end approach empowers organizations to easily add and manage new courses and programs to their websites and membership portals.

The Learning Management Module offers a customized role-based experience for users. Learners can register for classes, explore their course content, track their progress, and submit assignments and exams. Instructors can add and edit course information, upload course materials, grade assignments and exams, and follow learner performance. Course directors have a robust and flexible set of tools at their disposal to configure classes and programs, track revenue, and manage the learning management system. Education directors enjoy an automated system for purchasing group and bulk class registrations and assigning these licenses to learners.
